Enhance Prompt Discovery with Semantic Search in OpenAI-Cookbook #1

Edit | New issue

Open

DSP25SCM03S opened 5 minutes ago

{
"Title": "Enhance Prompt Discovery with Semantic Search in OpenAI-Cookbook",
"Body": "The OpenAI-Cookbook currently hosts a rich set of prompt engineering examples. However, users often face difficulty finding relevant prompts efficiently, especially when browsing manually through the content. This issue proposes the integration of a semantic search capability that allows users to search using natural language queries and retrieve the most relevant prompt examples using OpenAI's embedding API and a vector search backend such as Elasticsearch or FAISS. Key features include storing prompt examples as embeddings, providing a search interface for queries (e.g., 'summarize legal documents'), and returning the top 5 most relevant results. This enhancement will significantly improve user experience, promote discovery of advanced prompt patterns, and reduce the time needed to locate useful examples."
}
